Return thread tool with removable eyed awl

Dimension : 115 x 26 mm

Its plus : interchangeability of the needles, anti-rotation system for a total immobilisation of the needle, spiral to help coiling the thread before the final knot effortlessly

- EPROSE AND THE SUSTAINABLE DEVELOPMENT -

To answer an ethical code and a will to preserv the environment, the company EPROSE is part of an ecological process and gives a particular importance to the sustainable development notion. That is why we have developed a recyclable tools range which allows craftsmen to minimize their impact on the environment.

EPROSE handles are made in boxwood and are removable. A natural material and an interchangeability that allow the artisans to simply change the head of the tool when it becomes useless, without throwing away the whole tool whereas the handle is in good state.

Moreover, the boxwood used comes from France, which limits the carbon footprint. It goes the same way for the steel which is bought directly from French suppliers.

This manufacturing stages are thought to make small steps forwards the major issue that represents the preservation of our planet resources.

- EPROSE CONCEPTION -

EPROSE is not only about manufacturing and selling tools for the leather domain. It is also a whole process of reflexion, conception, arrangement and tests to reach the final tool that will answer your needs, even anticipate them. Yvan GIBERT, CEO, and his team favour creative aspects and enhance the cooperations with artisans who have specific needs. The aim is to exchange and develop the tool or tools that will turn out to be indispensable to the manufacturer of their products.

If you have a project that you want to realise, a questioning, a particular need or anything else, please do not hesitate to contact us.
